Nama: Excel Deo Cornelius

NRP: 05111840000117

Soal

Buatlah program yang mengimplementasikan

- 1. Multi process
- 2. Multi thread
- 3. Multi process asynchronous
- 4. Multi thread asynchronous

dengan menggunakan protokol transport UDP. Kasus dapat didefinsikan sendiri dan buatlah arsitektur jaringan anda sendiri di simulator GNS3.

Buatlah laporan dalam bentuk PDF yang berisikan screenshot dari

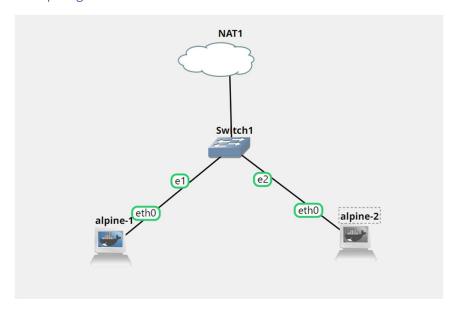

- 1. Deskripsi kasus yang dibuat
- 2. Gambar arsitektur jaringan (dalam simulator GNS3)
- 3. Program yang dibuat (1-4)
- 4. Hasil outputnya

Jawaban

1. Kasus

Terdapat 1 server dan 1 client atau lebih. Client akan meminta request untuk mengirimkan file gambar secara concurrency antara lain: multi process, multi thread, multi process asynchronous, dan multi thread asynchronous. kemudian server akan mengirimkan request tersebut dan mengirimkan ke seluruh client.

2. Topologi

Konfigurasi alpine-1: client

```
💰 alpine-1

3. Program yang dibuat

dalam program yang saya buat saya menggabungkan semua concurrency dalam 1 file client.py

New Paste

```

Berikut adalah codingan untuk server.py

```
import socket

SERVER_IP = '192.168.122.255'
SERVER_PORT = 5005

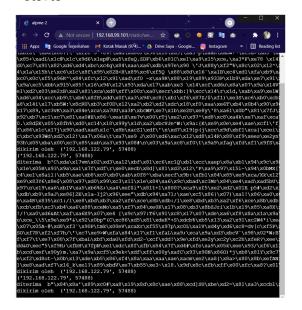

sock = socket.socket(socket.AF_INET, socket.SOCK_DGRAM)
sock.bind(("", SERVER_PORT))

while True:
    data, addr = sock.recvfrom(1024)
    print(addr)
    print("diterima ", data)
    print("diterima oleh " , addr)
```

4. Hasil output

1. Multi process Sync

- server

- client

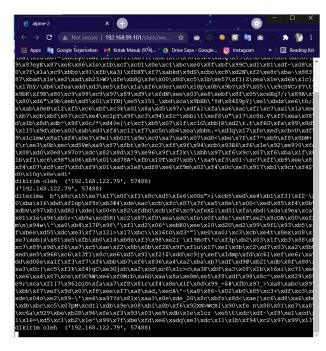

2. Multi process asynchronous

- server

- client

3. Multi thread Sync

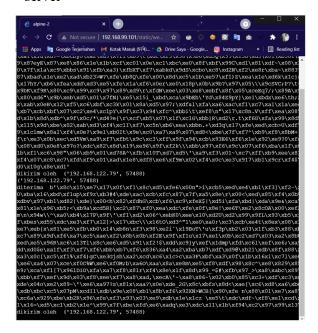

- server

- client

4. Multi thread asynchronous

server

- client
